## Installation Guide <br> DoP No. SUI/13/CE2+

Page 1 / 2

| Product identification | PINE PLYWOOD EN 636-2 S |
| :--- | :---: |
|  |  |
| Intended use | Structural roof decking on joists - Load category H |

## Application

1. Panels may be used as Structural Roof Decking on joists in Hazard Class 1 as "warm roof" in Load Category

H (roofs that are not accessible except for maintenance, repair and cleaning).
2. Panels may also be used in Hazard Class 2 as a "cold roof" in Load Category H provided adequate ventilation and vapour control layers are provided such that the equilibrium moisture content is normally limited to $17 \%$ and will only exceed $20 \%$ for short periods.
3. Panels may also be used as structural panels on pitched roofs.
4. Panels shall be transported, delivered, handled, stacked and stored as protected from the elements as possible and in accordance to the recommendations of clauses 6, 7, 8 and 9 of ENV 12872.
5. Before installation panels shall be allowed to reach an equilibrium moisture contend in accordance to the intended Service Class in accordance to clause 10 of ENV 12872.

| Essential characteristics |  |  | Declared performance |  |  |  | Technical Specification EN 12781 / EN 1195 Type testing |

| Product Types | $\mathbf{1 2 m m} / 15 \mathrm{~mm}$ | $\mathbf{1 8 \mathrm { mm } / 2 1 \mathrm { mm } / \mathbf { 2 4 m m } / \mathbf { 2 7 m m }}$ |  |  |
| Minimum faster dimension <br> (Ringshank) | Diameter $-2,4 \mathrm{~mm}$ <br> Length -50 mm | Diameter $-\mathbf{2 , 9 m m}$ <br> Length -50 mm |  |  |
| Maximum fastener spacings <br> on centres | Perimeter of the panels | $\mathbf{1 5 0 \mathrm { mm }}$ |  |  |
|  | Intermediate supporting joists <br> and noggings or stud of panels | $\mathbf{3 0 0 m m}$ |  |  |
|  | Maximum fastener distance from panel edge |  |  |  | $\mathbf{8 m m}$ |

## Installation

1. During and after installation, panels must be permanently protected from rain as quickly as possible.
2. Panels shall be laid with their long grain across the joists.
3. For square edged panels, the edges between the joists need to be supported on a minimum bearing of 18 mm and the short edges supported for their full length on the joists.
4. A 3 mm expansion gap shall be left between the edges of square edge panels to prevent buckling.
5. T\&G panels shall be laid across the joists with both short edges supported on a joist.
6. All panels joints need to be staggered.
7. An expansion gap of 2 mm per metre run of panel shall be provided around the perimeter of the roof to upstands or abutting construction and panels shall be firmly fixed down to prevent buckling and uplift from air currents.
8. Panels shall be cut, drilled, laid down and fixed in accordance to clauses 11, 12 and 15 of ENV 12872 and in accordance to the spacings given in the following table:
